

B.C. tops green transport

VANCOUVER — The first Canada-wide survey ranking green urban transportation policies puts two B.C. cities at the top of a list of 27 urban areas.

The GreenApple Canada study, backed by the Appleton Foundation, gives Victoria the best marks for environmentally friendly transportation but Foundation spokesman Barry Appleton says the city still receives a “B” because it has lots of room for improvement.

Vancouver ranked second, followed by Ottawa-Gatineau in third place with Winnipeg fourth and Toronto and Montreal tied for fifth.

Twenty-seventh spot went to St. John's, N.L. because Appleton says the city announced acceptable green transportation policies but failed to follow through.

Appleton gave special nods to Hamilton for its leadership on anti-idling bylaws while Calgary is applauded for providing free transit in its downtown core.

The survey, which will become an annual event, considered everything from public transit infrastructure to air quality measures, anti-idling bylaws and even the total number of hybrid or alternative fuel vehicles in taxi or bus fleets.
